Name of LYNZOZYFIC Prescriber

This patient has received LYNZOZYFIC

LYNZOZYFIC therapy can cause Cytokine Release Syndrome (CRS) or Neurologic Toxicity, including Immune Effector Cell-Associated Neurotoxicity Syndrome (ICANS), which can be serious or life-threatening.

IMPORTANT SAFETY INFORMATION YOU SHOULD KNOW:

LYNZOZYFIC REMS PATIENT WALLET CARD

Carry this card with you at all times. **SHOW THIS CARD** to any healthcare provider involved in your care and if you go to the emergency room.

**IMPORTANT SAFETY INFORMATION FOR PATIENTS
RECEIVING TREATMENT WITH LYNZOZYFIC**

FOR THE PATIENT

Call your healthcare provider or get medical help right away if you develop any of these symptoms:

Symptoms of CRS:

- Fever of 100.4°F (38°C) or higher
- Chills or shaking
- Trouble breathing
- Fast heartbeat
- Dizziness or light-headedness

Symptoms of ICANS:

- Headache
- Agitation, trouble staying awake, confusion or disorientation, seeing or hearing things that are not real (hallucinations)
- Trouble speaking, writing, thinking, remembering things, paying attention, or understanding things
- Problems walking, muscle weakness, shaking (tremors), loss of balance, or muscle spasms
- Numbness and tingling (feeling like "pins and needles")
- Burning, throbbing, or stabbing pain
- Changes in your handwriting
- Seizures

You should always ask your doctor about taking other medications while taking LYNOZYFIC

IMPORTANT TO REMEMBER: You should be monitored for potential side effects for 24 hours after the first dose of LYNOZYFIC. You should plan to stay close to the location (within an hour) where you received your treatment with an adult caregiver during the 24-hour monitoring period. Your doctor will tell you if you need further monitoring for any other dose administration. If you have any of these symptoms, CALL YOUR DOCTOR at _____ or seek emergency medical attention right away! You should also tell your doctor if you have any other symptoms that bother you or do not go away.
